

RTS Connectivity

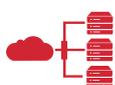

Mission critical applications such as EPOS and payment systems require highly resilient connectivity ... and that's what RTS provide for hundreds of sites across the UK and overseas.

As an OfCom accredited Communications Provider, we supply a full range of connectivity solutions from PSTN line to ADSL, FTTC, EFM and Leased Lines.

We run private MPLS networks for our customers and private broadband connections directly into our core network. Diverse connections between our 3 datacentres ensure that single points of failure are eliminated. At a site level, we can provide dual connections from different carriers to give high levels of resilience and bandwidth. 3G/4G connections can also be made available for additional redundancy. All core services are proactively monitored 24x7x365. Both private and public broadband services support all variations of DSL including up to 80Mbps fibre services where available.

SERVICES OVERVIEW

CONNECTIONS

RTS can offer all available connection options; ADSL, FTTC, EFM and lease lines, either connected directly into our highly secure core or open to the internet.

LINE INSTALLS

We manage the whole installation process and take the worry and workload away from your IT department. We have over 15 years' experience in multi-site rollouts .

LOCAL NETWORKS

We install, manage and support Local Area Networks for hundreds of sites right across the UK, with remote management and proactive support, RTS are a logical choice.

SUPPORT

Core infrastructure is fully managed and proactively supported, our helpdesk is available from 8AM to 11PM, 7 days a week.

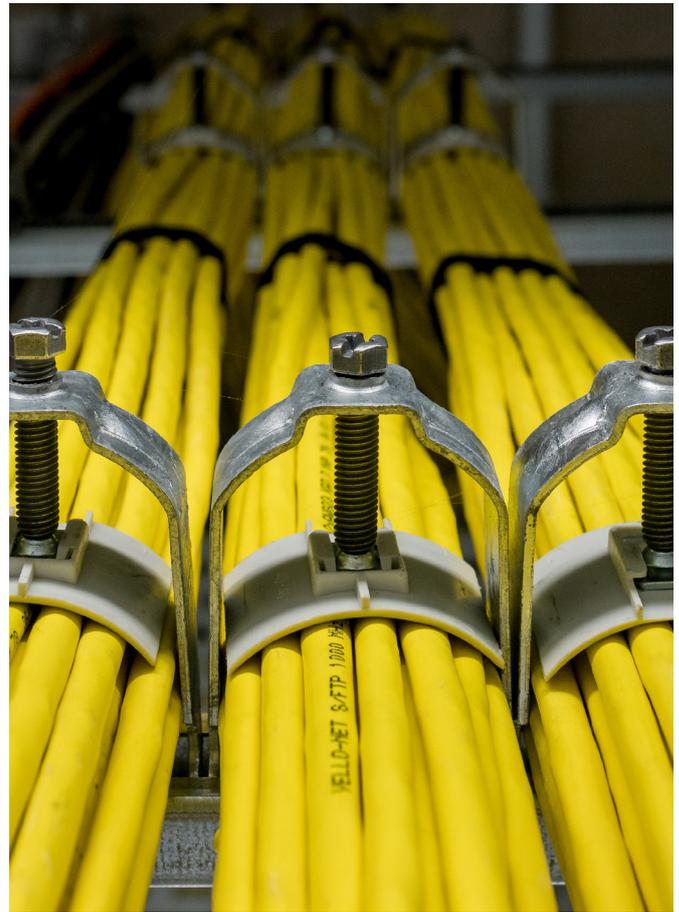

FULLY MANAGED SITES

RTS have over 15 years of experience in managing multi-site deployments across retail, hospitality, local government and other sectors. We have a team of PRINCE 2 project managers ensuring that large deployments run to schedule with minimal impact to the business. RTS manage the whole installation process using proven methodologies, liaising with site managers, installation engineers and external parties involved in the process.

We proactively monitor and manage faults on all lines, dropped connections are identified within minutes and we'll contact the site for fault diagnosis before you're even aware of a problem. What's more, our public broadband service can also include internet filtering approved by the 'Friendly Wi-Fi' scheme.

Network management onsite can include multiple levels of security and network segregation, such as 802.1X, VLANs and DMZ networks. RTS can work with you to define the correct network topology for your business.

- RETAIL TECHNOLOGY SERVICES -

NETWORKS

With over 15 years' experience in running secure, highly resilient networks for our customers, we are an OFCOM accredited communications provider, able to offer private, public & hybrid solutions.

SECURITY

RTS have achieved the highest standard in information security and processes – ISO27001. Network security assessments, penetration testing, phishing risk evaluation are all part of our capability.

DATACENTRES

We run our own highly secure, highly resilient datacentres in multiple locations with multiple high-speed network connections ensuring that mission critical services are always available.

TELEPHONY

Standard PSTN lines to VoIP and call centre solutions, RTS provide innovative and cost effective telephony solutions. We also provide some of the best price SIP calling plans on the market.
